## Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

AWAKE is built on a strong and loyal community base gained through high quality experiences. Our community will be able to enjoy the following activities on the platform.

## Project Engagement

During the 29th of March 2022, **AWAKE Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

**v1.0**

- <https://bscscan.com/address/0x4d587FBD0173E7ba114125787d2b17eDa6D47c34#code>

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
Context
Ownable
IERC20
IERC20Metadata
 SafeMath
 SafeMathInt
 SafeMathUint
 Clones
ERC20
IUniswapV2Router01
IUniswapV2Router02
IUniswapV2Factory
IUniswapV2Pair
DividendPayingTokenInterface
DividendPayingTokenOptionalInterface
DividendPayingToken
TokenDividendTracker
```

# Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

## v1.0

File Name	SHA-1 Hash
contracts/awake.sol	a1ed1d61f2c3540aaa7c29fe13ae3cd7f0f8fd75

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	4	4	8	2

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	138	6

Version	External	Internal	Private	Pure	View
1.0	93	122	8	28	63

### State Variables

Version	Total	Public
1.0	44	28

### Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	<code>&gt;0.8.0</code>		yes	yes (3 asm blocks)	

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	------------	--------------------

1.0	yes					yes → AssemblyCallName:create → AssemblyCallName:create2 → NewContract:TokenDividendTracker
-----	-----	--	--	--	--	--

## Inheritance Graph v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

### Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

1. EnemyAddress	18. transfer
2. approve	19. transferFrom
3. claim	20. transferOwnership
4. decreaseAllowance	21. updateClaimWait
5. excludeFromDividends	22. updateGasForProcessing
6. excludeFromFees	23. updateMinimumTokenBalanceForDividends
7. excludeMultipleAccountsFromFees	24. updateUniswapV2Router
8. increaseAllowance	
9. processDividendTracker	
10. renounceOwnership	
11. setAutomatedMarketMakerPair	
12. setBuyTaxes	
13. setDeadWallet	
14. setMarketingWallet	
15. setSelTaxes	
16. setSwapTokensAtAmount	
17. swapManual	

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	10.000.000		

Comments:

### v1.0

- Mint function is renamed to cast
- `_setbalance` can mint token

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

### v1.0

- `_setBalance` function can burn token
- If `sellDeadFee` is higher than 0 it will send tokens to dead wallet
  - Dead wallet can be set by the owner
- Owner can lock user funds by
  - Blacklisting

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

## Overall checkup (Smart Contract Security)

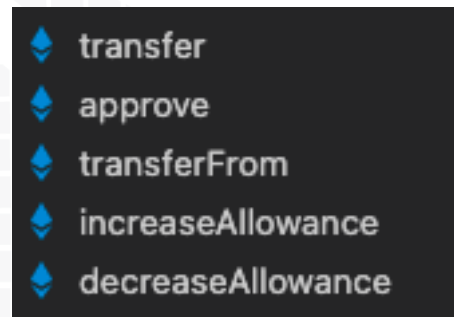

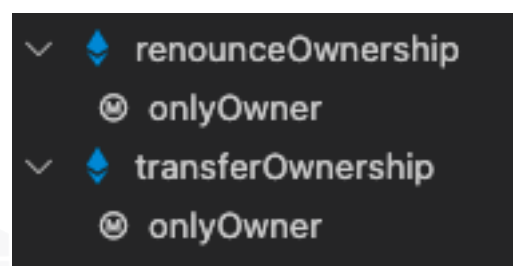

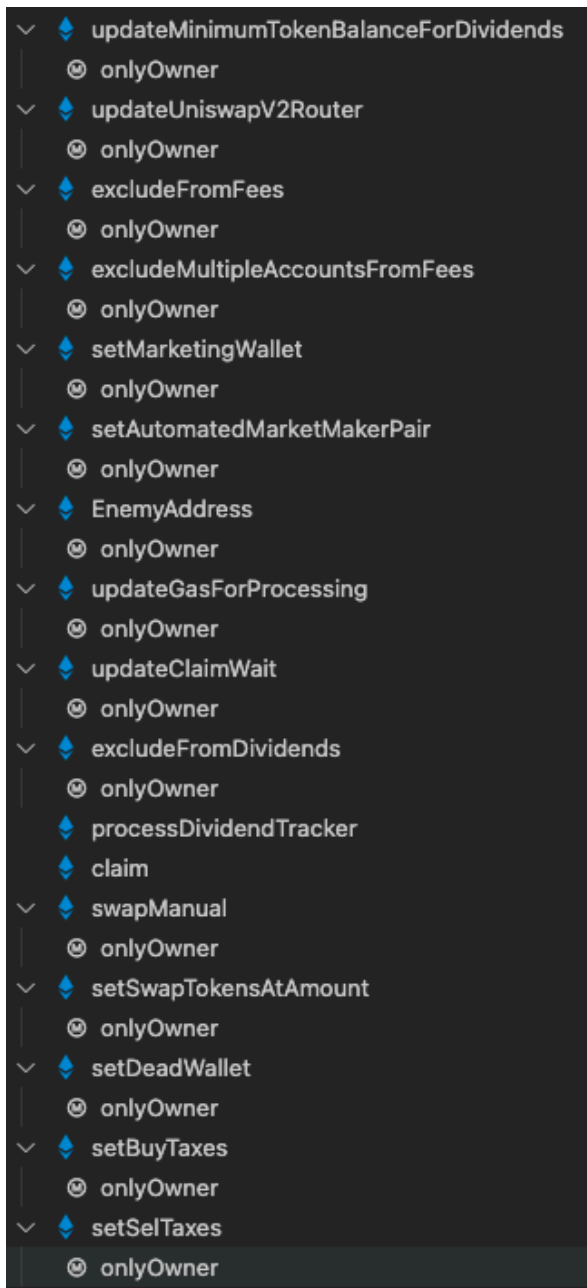

Tested	Verified
✓	✓

### Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

# Modifiers and public functions

## v1.0

## Comments

- Deployer can set following state variables without any limitations
  - swapTokensAtAmount
  - minimumTokenBalanceForDividends
- Deployer can enable/disable following state variables
  - excludedFromDividends
  - \_isEnemy
  - automatedMarketMakerPairs
  - \_isExcludedFromFees

- Deployer can set following addresses
  - `deadWallet`
  - `_marketingWalletAddress`
  - `uniswapV2Pair`

**Please check if an `OnlyOwner` or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/awake.sol	10	8	1695	1370	853	272	955	
	Totals	10	8	1695	1370	853	272	955	

### Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## AUDIT PASSED

### Critical issues

No critical issues

### High issues

No high issues

### Medium issues

No medium issues

### Low issues

Issue	File	Type	Line	Description
#1	Main	Contract doesn't import npm packages from source (like OpenZeppelin etc.)	-	We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities
#2	Main	A floating pragma is set	6	The current pragma Solidity directive is „^0.8.0“.
#3	Main	Missing Zero Address Validation (missing-zero-check)	1500, 1380, 1355, 820	Check that the address is not zero
#4	Main	Local variables shadowing	1312892, 820, 868, 875, 882	Rename the local variables that shadow another component
#5	Main	Missing Events Arithmetic	1506-1509, 1515-1518, 1497	Emit an event for critical parameter changes

## Informational issues

Issue	File	Type	Line	Description
#1	Main	Unused state variables	142	Remove unused state variables
#2	Main	Misspelling	See description	Change following words: <ul style="list-style-type: none"><li>- exlcude to exclude L1248</li><li>- tokensIntoLiquidity to tokensIntoLiquidity L1271</li></ul> Make sure to change it everywhere else as well.
#3	Main	Error message is missing	989, 903, 826, All require statements from safemath library	Provide an error message for require statement

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

### 01. April 2022:
